

This is a complete list of the written feedback I received from students after I taught ASTR 1280 (*The Origins of Nearly Everything*) in Summer 2020.

"Also I just wanted to thank you! The class was super interesting and I thoroughly enjoyed it. I'm sad it's over, which isn't something I thought I would say."

"First of all, I just wanted to thank you for such a good summer "semester." I thought astronomy would be really difficult online but honestly looking at all the photos I got from the RRT lab was enough to make the whole class for me. I thought it was so cool that I had the power to tell a very high powered telescope what to photograph and I understood what I was looking at more than ever. Thank you also for being so understanding and very responsive to questions!"

"Thanks so much for a great 4 weeks! Really, really enjoyed the class."
